

Our Chess Corner

(Address All Communications, Solutions, Etc., to CHESS EDITOR, SAN FRANCISCO CALL)

This column recently contained an article on the teaching of chess to beginners, in the form of a letter to the chess editor of the State Journal of Lincoln, Neb., by W. R. Ellis of that state. Since its publication in "Our Corner" we have received several letters on the subject from Californian devotees of Caisse, who commented very favorably on his suggestions and promised to reveal the mysteries to those that now sit in darkness. Mr. Ellis has met with so much encouragement that he has elaborated his ideas in further letters to the Journal.

This matter is highly important. Fraternal organizations, insurance companies, etc., are keenly alive to the necessity of constantly instilling new blood into their concerns. It should be the same with lovers of chess. There is not a more fascinating, delightful, beautiful pastime in the world. It is far too good to keep. And now that our Methodist friends have cast into the limbo of disused and inappropriate hymns that once popular missionary song, "From Greenland's Icy Mountains," I suggest that we rescue one more, understanding the sentiment to refer to chess and its blessings:

"Shall we whose souls are lighted with wisdom from on high,
Shall we to men brighten the lamp of life
ever?
Instruction! Oh, Instruction! the joyful sound
proclaims,
Till earth's remotest nation has learned Caisse's
name."

Following is the first installment of Mr. Ellis' methods of teaching beginners:

Hints on Teaching Chess

By W. R. ELLIS

Since my former letter has been published it has occurred to me that perhaps I might aid these chess players—
and I hope there are many of them—who will try to put the suggestion into practice and instruct some one else in the mysteries of chess.

I find that nearly every person who undertakes to learn the game is of the opinion that chess is very difficult and each doubts his ability to master it to any degree. I therefore start out to overcome this feeling in the student and proceed somewhat along these lines: First I set up the men and explain the moves or powers of each, showing first how the pawns move and capture; that a capture is not compulsory as in checkers, but optional; the moves of the bishop along diagonals and of the castles along ranks and file, showing that it is possible for both to attack or bear on the same point from different angles. Then I explain that the queen combines the moves of both castle and bishop and show how she can be placed to co-operate in attack upon same point with other pieces. Then I show the peculiar vaulting move of the knight, his ability to leap over rows of pawns or other pieces; and lastly, the move of the king, including castling, and explain that the object of the game is to checkmate the king, and I give illustrations of check by different pieces and of the different methods of escape from check by capture, intervention and moving king. When these moves have been fully explained, making use of the board and men for the purpose, I select several of the short published games called "Brilliants" in which mate is effected in from 10 to 15 moves—I keep clippings of all such for the purpose—and I play these over with the amateur student, letting him play the winning color and pointing out to him the reason for each move, either as a developing, combining for attack or defense, sacrificing for position, etc. This practice for a few games familiarizes him with the printed notation, which I deem one of the most important things for a student to learn. As he begins to see that he is really learning something, nothing looks more like Greek to the uninitiated than the printed notations of a game of chess, but when the student can follow these understandingly and play a game through he feels that he is learning—and he is. Then as a little further practice I clear the board of all pieces except the kings and two white rooks, which I let the student play and show him how to effect mate, repeating the operation several times by returning my king to the center of the board and letting him keep at it until he can mate in practically the fewest possible moves. Then I remove one castle and teach him how to mate with king and rook alone. What I have enumerated above is all I give the student the first evening and it is enough to tire him. I arrange for another session.

GAME DEPARTMENT

"Our Corner" of March 21 contained a promise of publication of the match game between the local expert, Dr. W. R. Lovegrove, and Lasker, in 1902, and his game against Pillsbury in 1904, with reminiscences by the gentleman who officiated as referee. Following are the two memorable contests, and a sketch of Lovegrove's chess career:

By the Referee

Before proceeding with my recollections of these famous chess battles it may be of interest to briefly review the remarkable record made by my friend, Dr. W. R. Lovegrove, against the foremost players of the world. For one who has followed chess as a recreation and pastime rather than a profession, it is indeed a noteworthy performance. Lovegrove at the age of 15 years was able to hold his own with the best players in San Francisco. In 1899 he defeated Gossip, the Australian champion. In 1900 he won several games from J. W. Showalter, who held the American championship. He defeated Lasker in an exhibition game in 1902, and followed this by winning a match from Max Judd, five out of eight games. During Pillsbury's visit to San Francisco, following the Cambridge Springs tourney, Lovegrove worsted him in a hard fought game in 30 moves. However, those who know the playing strength of the late S. Lipschutz, one time American champion, will probably agree that Lovegrove's greatest chess achievement was his defeat of Lipschutz at Los Angeles in 1894 by a score of four games won and two drawn out of four encounters.

When World's Champion Lasker visited this city in 1902 he delivered a lecture on the "Ruy Lopez," in the edifice of the Mechanics' Institute, which was destroyed in the fire of 1906. After the lecture a match game took place between San Francisco's best player and the champion. Clocks were brought out and at Lasker's request it was agreed to play 30 moves an hour. Lovegrove won the choice of colors and, of course, selected the white pieces. I go into details because I understand the impression gained ground in eastern chess circles that this game was not a suerre a mort. On the contrary, as the score, I think, will show, the champion was out to win. In discussing the game after its conclusion, however, he admitted that, despite his efforts, at no time was there more than a draw in sight. Indeed, in his endeavor to score, Lasker made a miscalculation on his fifty-first move, which lost him the game. The score follows:

Game No. 21

RUY LOPEZ

Lovegrove (white) vs. Lasker (black).
